

Q. 3 (i)

1 q d 1

At B:

$$\vec{r_j} = 0$$

$$u \sin 60 \cdot t - 0.5 g \cos 30 \cdot t^2 = 0$$

$$t = 2u/g$$

$$|AB| = u \cos 60 \cdot (2u/g) + 0.5 g \sin 30 \cdot (2u/g)^2$$

$$= 2u^2/g$$

$$(ii) \quad \text{At } B: \vec{v} = (u \cos 60 + g \sin 30 \cdot 2u/g) \vec{i} + (u \sin 60 - g \cos 30 \cdot 2u/g) \vec{j}$$

$$= 3u/2 \vec{i} - \sqrt{3}u/2 \vec{j}$$

$$\text{Rebound velocity} = 3u/2 \vec{i} + e\sqrt{3}u/2 \vec{j}$$

At C:

$$\vec{r_j} = 0$$

$$(e\sqrt{3}u/2)t - 0.5g \cos 30 \cdot t^2 = 0$$

$$t = 2eu/g$$

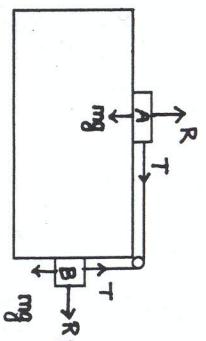

$$|BC| = (3u/2)(2eu/g) + 0.5g \sin 30 \cdot (2eu/g)^2$$

$$= (3+e)eu^2/g$$

$$\frac{|BC|}{(3+e)eu^2/g} = \frac{2|AB|}{4u^2/g}$$

$$\Rightarrow e = 1$$

Q. 4 (i)

$$A: \quad T = m(f + g/3) \quad \dots \dots \quad (i)$$

$$B: \quad mg - T = mf \quad \dots \dots \quad (ii)$$

$$R1 = mg/3$$

Eliminate f from equations (i) and (ii)

$$T = 2mg/3$$

$$A: \quad T - \mu mg = mg/3 \quad \dots \dots \quad (iii)$$

$$B: \quad mg - T - \mu R1 = 0 \quad \dots \dots \quad (iv)$$

$$R1 = mg/3$$

Add equations (iii) and (iv)

$$mg - \mu mg - \mu mg/3 = mg/3$$

$$1 - \mu - \mu/3 = 1/3$$

$$\Rightarrow \mu = 0.5$$
