

1976Q3 [Connected Bodies]

	A	C	D	E
MASS	3m	m	2m	m
Accel	$\uparrow a$	$\downarrow a$	$\downarrow a$	$\downarrow f$
FORCES	$\uparrow T$ $\downarrow 3mg$	$\uparrow T$ $\downarrow S$	$\uparrow S$ $\downarrow 2mg$	$\uparrow S$ $\downarrow mg$
<u>NII</u>	$T - 3mg = 3ma$	$T - 2S = ma$ $\Rightarrow T = 2S$	$2mg - S = 2m(f+a)$	$mg - S = m(a-f)$

∴ Eqns of motion are

$$T - 3mg = 3ma \quad (1)$$

$$T = 2S \quad (2)$$

$$2mg - S = 2mf + 2ma \quad (3)$$

$$mg - S = ma - mf \quad (4)$$

Needs S - Eliminate  $f$  from (3) and (4)

$$(3) \Rightarrow 2mg - S = 2mf + 2ma$$

$$(4) \times 2 \Rightarrow -2S + 2mg = 2ma - 2mf$$

$$\Rightarrow -3S + 4mg = 4ma \Rightarrow S = \frac{4m(g-a)}{3}$$

$$\text{So Eqn (2)} \Rightarrow T = 2\left(\frac{4m(g-a)}{3}\right) = \frac{8m(g-a)}{3} \quad (*)$$

$$\text{So (1)} \Rightarrow \frac{8mg - 8ma}{3} - 3mg = 3ma$$

$$\Rightarrow 8mg - 8ma - 9mg = 9ma$$

$$\Rightarrow -mg = 17ma$$

$$\Rightarrow \boxed{\frac{-g}{17} = a}$$

$$\therefore (*) \Rightarrow T = \frac{8m\left(g - \left(\frac{-g}{17}\right)\right)}{3} = \frac{8m\left(\frac{18g}{17}\right)}{3}$$

$$= \frac{8m \cdot 6g}{17}$$

$$\Rightarrow T = \frac{48mg}{17} \text{ Newtons}$$
